

2find-me Carers Watch

A revolution is here in personal safety

The 2Find-Me Carers Watch security for people who care

The Carers Watch is the world's first personal mobile emergency alert system in the form of a watch.

The Carers Watch is different from any other product. It can be changed as your needs change. The Carers Watch was designed by someone who has both the carers and wearers needs in mind. The Carers Watch can assist individuals who want to keep their independence or those who care for people who are vulnerable in our communities.

A personal safety system that is not limited to your home!

About the Carers Watch

Until now, personal emergency alarms have been large and normally limited to working around the home. The Carers Watch will work anywhere there is mobile phone coverage.

Tracking units are large and too uncomfortable to wear for many with a medical condition. The Carers Watch is lightweight and can be worn the same as an everyday watch, and also has an optional feature whereby the watch strap can be changed to a lockable strap to prevent removal by the wearer. It can also be adapted to be worn as a brooch or pendant making the Carers Watch suitable for all needs.

**The 2Find-Me Carers Watch - creates a powerful tool for
your peace of mind and for the safety of those you care for.**

The Carers Watch is a wrist watch that not only tells the time, but also incorporates the capabilities of a mobile phone and a panic alert. The Carers Watch can receive incoming calls, from any land line or mobile phone and has a Global Positioning System that can "talk" to any authorised mobile phone and the internet.

The Carers Watch has two call out buttons (A and B) and one red panic button. The panic button transmits the wearer's location and alerts the authorised contacts of a potential emergency. The call out buttons are programmed with your choice of contact numbers. These can be a family, friend or neighbours' contact numbers, so you are assured you are speaking to someone that you are familiar with. *Please note, extra charges may be incurred if the Carers Watch is continually used to call out.*

The contact numbers programmed into the call buttons are specified by the authorised person and can be turned on or off as required.

If the authorised mobile phone number calls the Carers Watch, the 2Find-Me server will reply to the authorised number by SMS giving the location of the wearer. This SMS will be sent as a simple street address, with a link that gives a map detail to an internet enabled phone.

The Carers Watch has a battery life in excess of 24 hours in normal use, but this will be reduced if the advanced features are activated. The Carers Watch also comes with a charger and a spare battery.

The Carers Watch has additional advanced features:

Auto Answer

The Carers Watch can be programmed to auto-answer in the event that the wearer is unable to answer themselves.

A Safe Zone (an invisible electronic fence)

The authorised person can program a safe zone ranging from 100m to 2000m around the wearers current location. Should the wearer leave the safe zone, then an automatic alert will be generated from the 2Find-Me server to the authorised person's mobile phone by SMS or via e-mail advising them that the wearer has left the safe zone.

GPRS Tracking

The Carers Watch sends repeated location details to the 2Find-Me server which enables an authorised person to know where the wearer has been and the direction in which they are heading. These details are then displayed on the authorised person's secure webpage along with a map image that can be used to direct emergency services if required.

SMS Breadcrumbs

The Carers Watch has the ability to track the wearer's position at intervals from 1 minute to 99 minutes. These details are automatically sent to the authorised persons mobile phone and webpage at a minimal cost. This feature would only be used when mobile internet coverage is not available, but there is mobile phone coverage.
